Amendments to the Claims

Please amend the claims as follows (the changes are shown with strikethrough for deleted matter and <u>underlining</u> for added matter). A complete listing of the claims is set out below with proper claim identifiers.

1. (Currently Amended) A curable composition comprising:

a vinyl polymer (I) having at least one crosslinkable silyl group on average, and <u>an</u> ester [[a]] compound (II) having an α,β - or α,γ -diol structure in the molecule <u>selected from</u> the group consisting of a glycerol monocarboxylic and acid ester, a polyglycerol carboxylic acid ester, a pentaerythritol monocarboxylic acid ester, a pentaeythritol dicarboxylic acid ester, a sorbitan monocarboxylic acid ester, and a sorbitan dicarboxylic acid ester.

wherein the vinyl polymer (1) has a molecular weigh distribution of less than 1.8.

- 2. (Cancelled)
- 3. (Previously Presented) The curable composition according to claim 1, wherein the crosslinkable silyl group is represented by the general formula (1):

$$-[Si(R^1)_{2-b}(Y)_bO]_m-Si(R^2)_{3-a}(Y)_a$$
 (1)

wherein R^1 and R^2 , the same or different, represent an alkyl group having 1 to 20 carbons, an aryl group having 6 to 20 carbons, an aralkyl group having 7 to 20 carbons, or a triorganosiloxy group represented by $(R')_3SiO$ -, wherein R' represents a monovalent hydrocarbon group having 1 to 20 carbons, and the a plurality of R's may be the same or different; when two or more R^1 s or R^2 s are present, the R^1 s or R^2 s may be the same or different; Y is a hydroxyl group or a hydrolyzable group; when two or more Ys are present, the Ys may be the same or different; a represents 0, 1, 2, or 3; b represents 0, 1, or 2; and m represents an integer from 0 to 19; provided that $a + mb \ge 1$.

4. (Previously Presented) The curable composition according to claim 1, comprising a vinyl polymer (I) which has a main chain produced by polymerizing a

monomer selected from the group consisting of a (meth)acrylic monomer, an acrylonitrile monomer, an aromatic vinyl monomer, a fluorine-containing vinyl monomer and a silicon-containing vinyl monomer as a main component.

- 5. (Original) The curable composition according to claim 4, comprising a vinyl polymer (I) having a (meth)acrylic polymer as a main chain.
- 6. (Original) The curable composition according to claim 5, comprising a vinyl polymer (I) having an acrylic polymer as a main chain.
- 7. (Original) The curable composition according to claim 6, comprising a vinyl polymer (I) having an acrylic ester polymer as a main chain.
- 8. (Previously Presented) The curable composition according to claim 1, wherein the vinyl polymer (I) has a main chain produced by living radical polymerization.
- 9. (Original) The curable composition according to claim 8, wherein the vinyl polymer (I) has a main chain produced by atom transfer radical polymerization.
- 10. (Original) The curable composition according to claim 9, comprising a vinyl polymer (I) which has, as a catalyst, a metal complex selected from the group consisting of a copper complex, a nickel complex, a ruthenium complex, or an iron complex.
- 11. (Previously Presented) The curable composition according to claim 1, wherein the crosslinkable silyl group of the vinyl polymer (I) is at the molecular chain terminal.
- 12. (Previously Presented) The curable composition according to claim 1, further comprising a polyether polymer having at least one crosslinkable functional group on average.

- 13. (Original) The curable composition according to claim 12, wherein the polyether polymer has a main chain which is essentially polyoxyalkylene.
- 14. (Original) The curable composition according to claim 13, wherein the polyether polymer has a main chain which is essentially polypropylene oxide.
 - 15. (Cancelled)
- 16. (New) A cured article prepared from the curable composition according to Claim 1.
